## BASIC-ABSTRACT:

NOVELTY - Current user's individual information is input through input device. Content of operation corresponding to user's situation detected by situation detector is searched in data memory. A setting unit sets up searched content of operation to controlled apparatus. A control unit operates controlled apparatus based on searched operation contents.

USE - For controlling operation of information retrieval apparatus, audio output apparatus and navigation apparatus in vehicle.

ADVANTAGE - Since content of operation is searched based on information input by user, predetermined controlled apparatus can be operated as per user's desire. Since content of operation is identified based on user's individual information and situation corresponding to user, controlled apparatus can be operated to match user requirements.
